

EDA Report on E-Commerce Dataset

Objective

To perform exploratory data analysis on E-Commerce dataset and identify patterns, trends and business insights.

Dataset Used:

E-Commerce Dataset containing customer transaction details, product information, quantity, price and country data.

Tools Used

- Python
- Pandas
- Matplotlib
- Seaborn
- Jupyter Notebook

Analysis Performed

- Dataset loading
- Data structure analysis
- Statistical summary
- Missing value analysis
- Country-wise transaction analysis
- Histogram and Boxplot
- Sales analysis
- Heatmap correlation analysis
- Product analysis

Findings

- Missing values were present in CustomerID column
- Most products had low prices
- Some products had price outliers

- United Kingdom had highest transactions
- Some countries generated highest sales revenue
- Product demand varied significantly

Conclusion

EDA helped identify customer behavior, product demand patterns and business sales trends using data visualization and statistical analysis.
